SECTION 01

Login & Authentication

SCREENSHOT: Login Screen

The ITforP Core login screen with company branding

- **Branded Login Screen** — Displays the ITforP logo on a full-screen company-branded background. If the logo fails to load (e.g., after a session reset), a styled text fallback automatically renders "ITforP CORE" so the screen always looks polished.
- **Secure Email & Password Login** — Authenticated via Supabase Auth with encrypted credential storage.
- **Password Reset** — Tapping "Reset Password" navigates to a dedicated screen that sends a reset link to the user's registered email.
- **Sign Up** — New technician accounts can be created directly from the login screen.
- **Persistent Sessions** — Users remain logged in between app launches. The app navigates directly to the main screen on reopen — no re-login required.

SECTION 02

Jobs List

SCREENSHOT: Jobs List — Admin

All jobs across all technicians, grouped by status

SCREENSHOT: Jobs List — Technician

Technician view showing only their assigned jobs

Role-Based Visibility

- **Admins** see every job in the system across all technicians.
- **Technicians** see only the jobs assigned to them — nothing more.

Status Sections

Jobs are automatically sorted and grouped into labeled sections:

Section	Description
Active	Jobs currently being worked on by a technician
Pending Approval	Work completed by the tech, awaiting admin sign-off
Scheduled	Upcoming jobs not yet started
Completed	Fully finished and admin-approved jobs
Closed	Archived jobs — fully resolved

Job Cards

Each card shows the job number, client name, site address, current status (color-coded), assigned technician, scheduled date, star rating (if reviewed), and payment status indicators (admin only).

Real-Time & Auto-Refresh

- **Pull-to-Refresh** — Swipe down at any time to manually reload.
- **Real-Time Updates** — The list automatically updates when any job changes using Supabase real-time subscriptions, with a 15-second polling fallback to ensure accuracy even in poor network conditions.
- **Auto-Refresh on Focus** — The list silently refreshes whenever the user returns to it from a job detail screen.

SECTION 03

Job Detail — Overview Tab

SCREENSHOT: Overview — Job Header

Client info, address, and admin
action buttons

SCREENSHOT: Overview — Trip Card

Trip card with status, schedule,
and action button

SCREENSHOT: Collapsible Description

Job description card expanded
and collapsed

SCREENSHOT: Collapsible Scope of Work

Trip scope of work toggled open
inside a trip card

SCREENSHOT: Reschedule Request Banner (Admin View)

Orange banner alerting admin to a technician's reschedule request

Job Header

- Displays job number, client name, and full site address. The address is tappable to open Apple Maps / Google Maps for turn-by-turn navigation.
- **Collapsible Description Card** — The job description section can be tapped to expand or collapse, keeping the view clean when it isn't needed.
- Admin-only: Edit Job and Export Work Order PDF buttons appear at the top of the screen.

Trip Cards

A job can have multiple trips (site visits). Each trip card displays the trip number, scheduled date/time, assigned technician, current status badge, and GPS check-in info. Two sections inside each card are independently collapsible:

- **Scope of Work** — Tap the header to expand the full scope text, or collapse it to save space. Each trip's scope can be toggled independently.

Trip Status Workflow

The technician advances the trip through statuses using a single action button on each trip card:

Status	Button Label	Who Can Advance
Scheduled	Go En Route	Technician
En Route	Check In	Technician
Checked In	Check Out	Technician
Checked Out	Submit for Approval	Technician
Pending Approval	Approve / Complete	Admin
Completed	—	—

GPS Check-In Verification

When a technician taps Check In, the app reads their current GPS location and compares it to the job site address. If they are more than 500 meters away, they receive a warning and are asked to confirm they are physically on-site before the check-in is recorded.

Future Date Block & Reschedule Request

If a trip is scheduled for a future date, technicians cannot tap Go En Route. They must send a reschedule request to the admin, who can then move the trip to today with a single tap.

- The technician sees a message explaining the trip date and a Send Request button.
- The request (with reason) is saved to the trip record in the database and logged in the event history.
- The admin sees an **orange banner** on the trip card: "Reschedule Request from [technician]."
- The admin can tap the banner to approve and reschedule the trip to today at 9:00 AM, or dismiss the request.
- On approval, the technician receives a push notification and the action is logged in the event history.

Digital Signature Capture

When submitting a trip for approval, the technician can capture a digital signature from the client directly on-screen using a finger or stylus. The signature is stored with the job record.

Technician Star Rating

After a trip is completed, admins can leave a star rating (1–5 stars) and a written review for the technician. Ratings appear on job cards and the technician's profile.

Admin Trip Management

- Add new trips with a date, scope of work, and technician assignment
- Edit existing trip details (date, scope of work)

- Delete trips
- Assign or reassign a technician to any trip
- Remove a technician from a trip

Export Work Order PDF

Admins can generate and share a professional PDF work order for any job with a single tap. The PDF is formatted for client or record-keeping use.

SECTION 04

Job Detail — Instructions Tab

SCREENSHOT: Instructions Tab

Trip selector tabs and scope of work displayed as a bullet list

- **Trip Selector** — A horizontal row of tab chips lets the user switch between trips. Each chip shows the trip number and a color-coded status indicator.
- **Scope of Work** — The full scope of work for the selected trip is shown as a clean bullet-point list for easy on-site reference.
- **Scheduled Date & Time** — The confirmed scheduled date and time for the selected trip is displayed at the top of the section.

Job Detail — Attachments Tab

SCREENSHOT:
Attachments — Grid View

Photo grid with uploaded site
images

SCREENSHOT:
Attachments — FAB Menu

Floating action button expanded:
Camera, Library, Document

- **Trip-Based Organization** — Attachments are organized per trip. A selector chip at the top switches between trips.
- **Photo Grid** — Uploaded images display in a responsive grid. Tap any image to view it full-screen.
- **Document List** — Non-image files (PDFs, Word docs, etc.) are listed with filename and file size.
- **Add Attachments** — A floating action button offers three options:
 - Take Photo — Opens the device camera for an instant capture
 - Photo Library — Browse and select existing photos
 - Document / File — Pick any file type from device storage
- **Automatic Image Compression** — All photos are automatically resized and compressed before uploading. Images are scaled to a maximum of 1,920 px on the longest edge at 75% JPEG quality — drastically reducing upload times and cloud storage costs with no visible quality loss.
- **Delete Attachments** — Long-press any attachment to delete it (with a confirmation prompt).

SECTION 06

Job Detail — Notes Tab

SCREENSHOT: Notes Tab

Notes feed with trip filter and timestamped entries

- **Trip-Filtered Notes** — Notes can be filtered to show only those for a specific trip, or viewed all together.
- **Add Notes** — Any user with job access can add a timestamped note attributed to their name.
- **Admin Notifications** — When a technician adds a note, all admins receive a push notification. The note author does not receive a self-notification.

SECTION 07

Job Detail — Chat Tab

SCREENSHOT: Chat Tab

Real-time job chat between technician and admin

- **Per-Job Chat Thread** — Each job has its own dedicated conversation between the assigned technician(s) and admins.
- **Real-Time Messaging** — Messages appear instantly for all participants via Supabase real-time subscriptions.
- **Message Attribution** — Every message shows the sender's name and timestamp.
- **No Notification Noise** — Chat messages intentionally do not trigger push notifications, keeping the notification inbox focused on actionable job events. Users check the chat tab directly.

Dashboard

Admin Only

SCREENSHOT: Dashboard — Stat Cards

KPI cards showing job counts at a glance

SCREENSHOT: Dashboard — Technician Workload

Ranked list of technicians by active job count

Job Statistics Cards

Real-time KPI cards give management an instant operations overview:

Card	What It Shows
Total Jobs	All jobs in the system
Active	Jobs currently in progress
Pending Approval	Jobs awaiting admin sign-off
Completed	Successfully finished and approved jobs
Closed	Fully archived jobs
Unpaid	Completed jobs with outstanding client or tech payment
This Month	New jobs created in the current calendar month

Technician Workload

A ranked list of all technicians sorted by number of assigned jobs. Tap any technician to navigate directly to a filtered view of all jobs assigned to them.

Calendar

Admin Only

SCREENSHOT: Calendar — Month View

Monthly calendar with trip dots on
scheduled dates

SCREENSHOT: Calendar — Day Detail

Selected day listing all trips
scheduled for that date

- **Monthly Calendar View** — Navigate forward and backward through months. Each day with scheduled trips shows colored indicator dots (up to 3, with a "+N" overflow label for busier days).
- **Day Detail Panel** — Tap any date to see a list of all trips scheduled for that day, showing job number, client name, trip number, and status badge.
- **Tap to Open** — Tap any trip in the day detail to navigate directly to that job's detail screen.

SECTION 10

Create & Edit Jobs

Admin Only

SCREENSHOT: Create Job Screen

Admin entering new job details

SCREENSHOT: Edit Job Screen

Admin editing an existing job

Create Job Fields

- **Job Number** — Unique identifier for the job
- **Title / Description** — Brief summary of the work to be performed
- **Client Name** — The customer or company name
- **Store / Unit Number** — Location identifier (optional)
- **Site Address** — Full street address of the work location
- **Custom Fields** — Admins can add any number of additional label/value pairs (e.g., "PO Number," "Contract ID," "On-site Contact") to capture job-specific metadata

Additional Admin Tools

- **Import Jobs (CSV)** — Bulk-import jobs from a CSV file by mapping columns to job fields.
- **Add Technician** — Create new technician accounts directly from within the app.

SECTION 11

Notifications

SCREENSHOT: Notifications Screen

Notification inbox with unread count banner and individual entries

- **In-App Inbox** — All notifications are stored in a scrollable inbox accessible from the navigation bar bell icon.
- **Unread Indicators** — Unread items appear in bold. A banner at the top shows the total unread count with a one-tap Mark All Read shortcut.
- **Tap to Navigate** — Tapping any notification opens the relevant job directly.
- **Delete** — Individual notifications can be deleted from the inbox.

Push Notification Events

The following events trigger push notifications to relevant users:

Job status changes

Check-in / check-out

Submitted for approval

Job approved

New notes added

Reschedule request sent

Reschedule approved

Smart Filtering: Users never receive push notifications for their own actions. Admins are not notified when they personally update a job. Chat messages do not trigger push notifications.

SECTION 12

Profile

SCREENSHOT: Profile Screen

User profile showing name, email, role, and logout option

- **Account Information** — Full name, email address, and role (Admin or Field Technician).
- **Avatar** — A circular avatar displays the user's initials.
- **App Version** — Shown at the bottom for easy reference during support calls.
- **Logout** — A confirmation dialog prevents accidental logouts. The user is returned to the Login screen on confirmation.

SECTION 13

Key Workflows

13.1 — Full Job Lifecycle (Technician View)

END-TO-END TRIP EXECUTION

- 1 **Job assigned** by admin — technician receives push notification
- ↓
- 2 Technician opens job in Jobs List → reviews scope in **Instructions tab**
- ↓
- 3 Day of job: taps **Go En Route** (blocked if future date — see 13.2)
- ↓
- 4 Arrives on site: taps **Check In** — GPS location is verified against site address
- ↓
- 5 Completes work — uploads photos, adds notes, communicates via Chat
- ↓
- 6 Taps **Check Out** — optionally captures **client digital signature**
- ↓
- 7 Taps **Submit for Approval** — admin receives push notification
- ↓
- 8 Admin reviews job, attachments & notes → taps **Approve / Complete**
- ↓
- 9 Job moves to **Completed** — technician notified

13.2 — Reschedule Request Workflow

FUTURE-DATE TRIP RESCHEDULE

- 1 Technician taps Go En Route on a future-dated trip — app blocks the action
- ↓
- 2 App shows scheduled date and offers a **Send Request** button
- ↓
- 3 Technician enters a reason and submits — request saved to the trip & event history logged
- ↓
- 4 **Admin receives push notification**
- ↓
- 5 Admin opens job → sees **orange banner** on the trip card
- ↓
- 6 Admin taps banner → chooses **Reschedule to Today** (sets time to 9:00 AM)
- ↓
- 7 Technician receives push notification — trip is now ready to start
- ↓
- 8 Action **logged in Event History** with timestamp and user attribution

13.3 — Multi-Trip Jobs

A single job can have multiple trips (site visits) — useful for follow-up visits, phased projects, or warranty returns. Each trip has its own:

Scope of work

Scheduled date & time

Assigned technician

Attachments

Notes

Status progression

Admins can add additional trips from the Overview tab at any time. All detail tabs (Instructions, Attachments, Notes) include a trip selector to switch context.

13.4 — Event History & Audit Trail

Every significant action is automatically logged:

Status changes

Check-in & check-out

Submission & approval

Reschedule requests

Reschedule approvals

Technician assignments

Notes added

Attachments uploaded

Each event records the timestamp and the user who performed the action, creating a complete and tamper-evident audit trail for every job.

SECTION 14

Role Permissions Summary

Feature	Admin	Field Technician
View all jobs	✓ All jobs	✓ Own jobs only
Create / Edit jobs	✓	—
